08.30 am - 06.00 pm

Diagnostic Ultrasound in Gynecology and Endometriosis Diagnosis and Presurgical Staging- Imaging Roadtrip for Pelvic and Abdominal Lesions Mapping.

Imaging is a crucial part of gynaecological practice. Gynaecologists performing endoscopic surgery should be able to perform gynecological ultrasound to diagnose benign and malignant diseases. The course aims to provide the necessary knowledge and practical skills to become a gynaecological ultrasound practitioner. The programme consists of brief lectures and hands-on-training sessions using transvaginal simulators, PC stations and ultrasound machines.

TUESDAY 7 MAY

08.30 am - 05.00 pm

Theoretical and Practical Course on Vaginal Surgery and Pelvic Floor Reconstruction

This course covers the basics of laparoscopic and vaginal procedures for the treatment of pelvic floor dysfunctions. It aims to exchange knowledge, skills and experience between surgeons that prefer one or the other approach. Both laparoscopy and vaginal surgery are characterized by minimally invasiveness and, ideally, a pelvic surgeon should have a portfolio of surgical procedures that would include both of them. The course tries to illustrate the tips and tricks of the most common procedures of vaginal and laparoscopic procedure with a final practical part with pelvic trainers.

**Laparoscopic Hysterectomy from A to Z**

Laparoscopic hysterectomy is nowadays the gold standard to remove the uterus and despite being considered an easy procedure, it encompasses a lot of variances and requires specific competences to be performed safely. The objectives of the course are to provide the participant basic knowledge to perform a safe procedure and at the same time an overview of the different techniques and tools.

Endometriosis: The Everlasting Challenge.
From Accurate Diagnosis to Appropriate Medical and Surgical Treatment

This course provides an overview of the most recent and contemporary approaches for deep endometriosis, from diagnosis to treatment and the relation between endometriosis and cancer.

Course Objectives

At the conclusion of this activity, the participant will be able to:

- think about deep endometriosis as a specific disease;
- recognize the best pre-operative strategy to diagnose deep endometriosis;
- define the best way to treat endometriosis in infertile patients;
- become aware of new minimally invasive approaches to treating adenomyosis;
- become familiar of the relationship between endometriosis and cancer
- understand the current state of the surgical treatment of urinary tract and bowel endometriosis.
